GREAT DECK WITH BORACOL 10Rh

LAVTOX 

BORACOL 10Rh is a liquid disinfectant for wood and masonry. Use on teak decks, garden furniture, decks, roofs, brick walls, etc.

Boracol 10Rh lasts up to 3 years, depending on the surface and climate.

Boracol 10 Rh is colourless and is sprayed on or applied with brush. It can be put on damp surfaces. On outside surfaces apply only when rain is not expected for 24 hours to allow the product to penetrate into the wood.

Boracol 10Rh is available in 1 - 2½ - 5 - 20 ltr.

The teak surfaces on this 8 year old HR34 were treated every autumn with Boracol 10Rh. Halberg Rassy recommend Boracol 10Rh for teak surfaces on their boats.

TREATMENT of TEAK-DECKS

1. Use **Boracol 10Rh** only on clean surfaces free from other treatments. Prior to application wash with a fat soap (e.g. coconut soap) and rinse thoroughly.

2. Apply **Boracol 10Rh** with brush or broom (wear gloves) and treat to saturation of the deck. Use approx. 1 litre per m². Can be used on damp surfaces. Avoid contact with aluminium. Apply during dry periods to ensure penetration into the wood.

3: After 24 hours **Boracol 10Rh** will have penetrated into the wood and the deck may be carefully washed. It will have a light grayish surface. When cleaning during the season use soap. Apply Boracol 10Rh annually.
